

Torq Hyperautomation: A Quantum Leap Forward

The only no-code, low-code, and full-code security automation with true enterprise scalability.

The Current State of SecOps

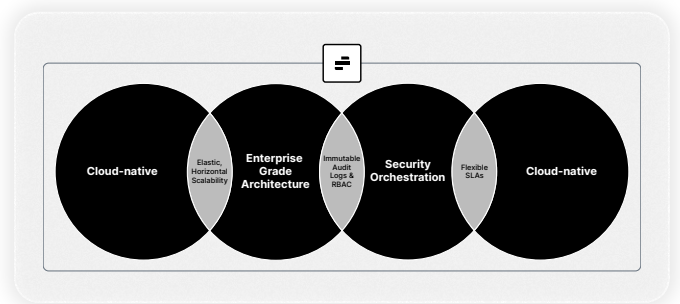

Despite significant investments in cybersecurity tools and security operations center (SOC) staff, organizations continue struggling to handle processes efficiently, such as triaging, and investigating and resolving incidents in a timely manner. Security teams can't keep up with the ever-increasing alert volume due to manual processes, inefficient workflows, involving additional experts, and retaining qualified personnel.

The Torq Solution

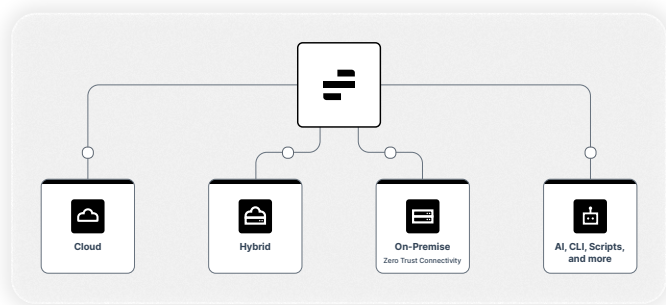

Enterprise-Grade Security Hyperautomation for Everyone

Torq supercharges security teams' productivity with comprehensive capabilities for creating and managing powerful, easy-to-use, no-code, low-code, and full-code workflows. It helps security teams do more with limited resources and increase productivity, as well as improve their security posture.

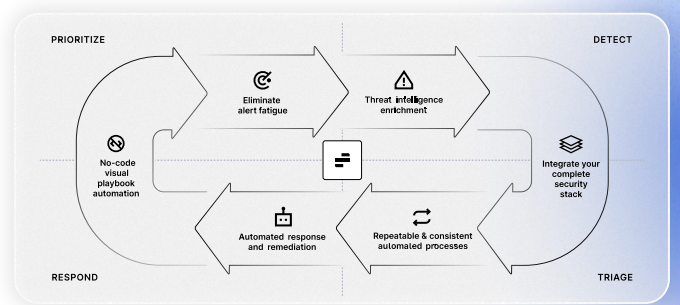

Secure, Resilient, and Scalable Multi-tenant Capabilities

Torq is cloud-native, built on secure, zero-trust architecture, with elastic, horizontal scalability, flexible SLAs, and orchestration. It provides enterprise-grade immutable activity and audit logs to meet the most stringent compliance requirements, granular scope, and role-based access control (RBAC).

Connect to Anything, Anywhere

Torq is architected for maximum deployment flexibility, supporting cloud (SaaS), hybrid, and on-premise infrastructures simultaneously.

Dramatically Enhance Your Security Posture

Torq delivers world-class enterprise automation capabilities, best practices templates, data processing tools, and intelligent, opinionated recommendations that empower organizations to maximize the ROI of their existing security stack.

What Makes Torq Unique

Torq deploys in minutes, improving security operations immediately. Torq's drag-and-drop UI, and pre-built automation workflows enable teams to get up and running quickly. It offers native no-code development capabilities while comprehensively supporting the integration of low-code and full-code tools. On day one, organizations can measure Torq's cost savings by maximizing team productivity and process effectiveness.

Create Powerful Workflows in Minutes

With a solution powerful enough for the most complex threat responses, yet easy enough for anyone to use with a drag-and-drop editor, Torq eliminates repetitive security tasks.

No Code or Your Code

Torq dramatically elevates non-technical user capabilities, providing them with the power of a developer when interacting with APIs and services, while providing low-code and full-code support for power users.

Connect Every App and Stack

No punching holes in your firewall for VPN services or reverse proxies. Torq uses zero-trust containerized agents making outbound-only connections for on-premise environment connectivity.

Integrate Anything. Automate Everything.

Gain vast flexibility to expand use cases with capabilities such as SSH, PowerShell, SQL, Python, Kubernetes, AWS, GCP, Azure CLI, and other scripting or programming languages. Run multiple scripting languages concurrently within automation workflows.

No Costly Professional Services

All Torq customers benefit from dedicated technical experts that help organizations achieve their automation goals at no extra cost. Say goodbye to surprise consulting bills that cost more than the automation solution.

Real ROI, Productivity, and Cost Savings

Torq users experience a 10X+ operational and productivity boost just weeks after deployment. The Torq Insights dashboard granularly measures time savings and operational efficiency for total visibility into the platform's impact.

About Torq

Torq is your security product's favorite security product. Torq's enterprise-grade security hyperautomation platform unifies and automates the entire security infrastructure to deliver unparalleled protection and productivity. Torq drives maximum value and efficiency from existing security investments. It supercharges security teams with powerful, easy-to-use no-code, low-code, and full-code workflows that reduce manual tasks, freeing security professionals to focus on higher-value strategic activities.
